

for california districts

for california school districts, preschool and tk

a quiet hub for preschool and transitional kindergarten teachers in a california district. drdp-2025, asq, deca, iep friendly write ups, structured incident logs, and the daily family handoffs that take a teacher's evening.

the california fit

drdp-2025 is the rating instrument for cspp and most district funded preschool. tiny signals carries the measure language in plain words a teacher can use in a parent conference.

asq-3 and asq:se-2 are the screeners most california programs run at 9, 18, 24, 36, 48, and 60 months. prompts are loaded by age window.

transitional kindergarten, too

california's universal tk expansion through 2025-26 means thousands of new tk classrooms staffed by teachers who came from k or from preschool. the site speaks to both. the daily handoff, the conference write up, and the incident log are the same shape whether the child is three or five.

what this is not

not a student information system. not a replacement for the district's assessment portal or sis. it is the writing layer that sits next to those tools and handles the parts that take a teacher's evening.

no district contract is required for a teacher to use it. no per seat license to negotiate before a teacher can try it for a week.
