

for early head start child care partnerships

for early head start child care partnerships

ehs-ccp classrooms and family child care homes serve infants and toddlers under a partnership structure. tiny signals carries the infant and toddler writing layer, asq, deca, family handoffs, in a single page a teacher or provider can open on any device.

for infant and toddler classrooms

- asq-3 and asq:se-2 prompts at the right age window. deca strengths language for infants and toddlers.
- daily family handoff written for a parent picking up a one year old, not for a preschool age child.

works in centers and in fcc homes

the same page works for a center room with two co-teachers and for a family child care provider running solo with mixed ages.

what it is not

not a child information system, not a replacement for ehs reporting. it is the writing layer for the family conversation.
