

for first 5 county commissions

for first 5 commissions and funded programs

first 5 funded work, preschool sites, family child care providers, home visitors, often asks for evidence of warm, consistent, bilingual family communication. tiny signals is a writing layer the teachers and providers in those programs can open on any device, with no install and no per-seat license.

the first 5 fit

first 5 grants often call for documented family engagement, asq screening completion, and dual language learner support, exactly the parts of the day that take a teacher's evening.

the site covers asq-3 and asq:se-2 with age-windowed prompts, a one minute daily family handoff, a fifteen-minute conference write up, and a spanish mirror for family-facing writing.

for the family child care providers in the network

first 5 county networks often include family child care providers running mixed-age, single-teacher homes. tiny signals works the same on that schedule: one device, one teacher, no roster upload required, no co-teacher login needed.

what it is not

not a grant reporting system, not an outcomes measurement platform, not a replacement for drdp tech or a county data warehouse. it does not score children and it does not export evidence to a funder.

how first 5 usually shares it

a single link in a grantee newsletter or a quarterly provider meeting reaches teachers and providers directly. no county contract is required before a classroom or family child care home can try it for a week.
